TRDC Climate and Sustainability Impact Assesment

This toolkit is a self-assessment to help officers think about how their policies, projects, procurements, commissioning and services can align with Three Rivers' Climate Emergency and Sustainability Strategy. It also supports report authors to draft the environmental implications section on decision reports, and procurement strategy reports.

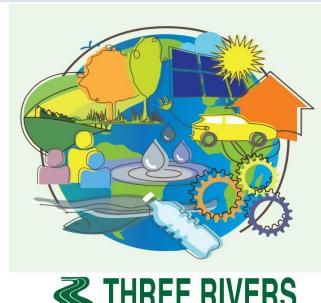

How to use the tool

The self-assessment is intended to help officers reflect critically on their project or service's environmental impact. . It is a reflective tool, not a framework for approving or rejecting a decision, so it will work best if each question is considered honestly and carefully.

We envision this tool will be used early in the design of a project/policy/procurement to identify areas where environmental harms can be mitigated, and environmental benefits enhanced. If you would like advice, please discuss with your Head of Service, and contact the Climate and Sustainability Team if necessary.

Once you are happy that your proposal is optimised, then complete this form, and copy the results in each section in to your decision report (committee/synopsis report) where applicable.

Colour code	Recommendation
Dark green (4)	Strong positive impacts for sustainability. Recommendation to proceed as is with this aspect.
Light green (3)	Some positive impact for sustainability. Recommendation to further enhance this aspect where possible and proceed.
Yellow (2)	Some negative impacts sustainability. Recommendation to review these aspects and find mitigations where possible.
Red (1)	Considerable inconsistency with the council's sustainability objectives. Strong recommendation to review these aspects and find mitigations.
Grey (0)	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.

Once you've selected your answer in the "Impact" column (C), then give the relevant score in the "Score" column (E). Higher scores indicate more sustainable proposals.

These questions should be considered for services, goods and projects we procure as well as those we deliver directly. Delivery models, specifications and tender evaluation should be shaped to ensure our contractors are aligned with our sustainability and net-zero commitments.

Against each area, the assessment presents prompts to highlight best practice suggestions and enable consideration of how negative impacts could be lessened on a project.

This assessment was inspired by Jim Cunningham at Hammersmith and Fulham Council and developed by officers of Three Rivers Distrcit Council.

TRDC Climate and Sustainability Impact Assesment

,	
Score / Colour Code	Impact and Recommendation
Dark green (4)	Strong positive impacts for sustainability. Recommendation to proceed as is with this aspect.
Light green (3)	Some positive impact for sustainability. Recommendation to further enhance this aspect where possible and proceed.
	Some possible negative impacts for sustainability. Recommendation to review these aspects and find mitigations where possible.
Red (1)	Considerable inconsistency with the council's sustainability objectives. Strong recommendation to review these aspects and find mitigations.
Grev (0)	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed

Guidance for use

Please answer all questions from the drop-down options in the 'impact' column (C), including 'not applicable' as needed.

Please email your completed copy of the form to Joanna.Hewitson@threerivers.gov.uk.

Key to the colour coding of answers is given at the top of the page.

Ways to optimise sustainability and work towards net zero carbon:

Insulate buildings to a high standard.

- Include energy efficiency measures when carrying out refurbishment to deliver improvement in EPC ratings. - Replace gas boilers with renewable heating, such as heat pumps. Consider District Heat Networks where appropriate.

- Construct new buildings to Passivhaus standard.

- Design and deliver buildings and infrastructure with lower-carbon materials, such as recycled material and timber

- Use construction methods that reduce overall energy use, such as modular, factory-built components, or use of electrical plant on-site.

- Install solar panels or other renewable energy generation, and consider including battery storage.

- Switch to a certified renewable energy provider e.g. utilise power purchase agreements (PPA)

- Use energy-efficient appliances.

- Install low-energy LED lighting.

- Install measures to help manage building energy demand, such as smart meters, timers on lighting, or building management systems.

Ways to optimise sustainability and work towards net zero carbon:

- Reduce the need to travel e.g. through remote meetings, or rationalising routes and rounds.

- Share vehicles or substitute different modes of travel, rather than procuring new fleet.

- Specify electric, hybrid, or most fuel efficient vehicles for new fleet or for services involving transport. - Support users and staff to walk, cycle, or use public transport e.g. with cycle parking, training, incentives.

- Use zero-emission deliveries

- Model and mitigate the project's effect on traffic and congestion e.g. retiming the service or deliveries
