# TRDC Climate and Sustainability Impact Assesment

This toolkit is a self-assessment to help officers think about how their policies, projects, procurements, commissioning and services can align with Three Rivers' Climate Emergency and Sustainability Strategy. It also supports report authors to draft the environmental implications section on decision reports, and procurement strategy reports.

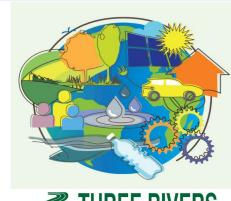

# How to use the tool

The self-assessment is intended to help officers reflect critically on their project or service's environmental impact. . It is a reflective tool, not a framework for approving or rejecting a decision, so it will work best if each question is considered honestly and carefully.

We envision this tool will be used early in the design of a project/policy/procurement to identify areas where environmental harms can be mitigated, and environmental benefits enhanced. If you would like advice, please discuss with your Head of Service, and contact the Climate and Sustainability Team if necessary.

Once you are happy that your proposal is optimised, then complete this form, and copy the results in each section in to your decision report (committee/synopsis report) where applicable.

Colour code	Recommendation
Dark green (4)	Strong positive impacts for sustainability. Recommendation to proceed as is with this aspect.
Light green (3)	Some positive impact for sustainability. Recommendation to further enhance this aspect where possible and proceed.
Yellow (2)	Some negative impacts sustainability. Recommendation to review these aspects and find mitigations where possible.
Red (1)	Considerable inconsistency with the council's sustainability objectives. Strong recommendation to review these aspects and find mitigations.
Grey (0)	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.

Once you've selected your answer in the "Impact" column (C), then give the relevant score in the "Score" column (E). Higher scores indicate more sustainable proposals.

These questions should be considered for services, goods and projects we procure as well as those we deliver directly. Delivery models, specifications and tender evaluation should be shaped to ensure our contractors are aligned with our sustainability and net-zero commitments.

Against each area, the assessment presents prompts to highlight best practice suggestions and enable consideration of how negative impacts could be lessened on a project.

This assessment was inspired by Jim Cunningham at Hammersmith and Fulham Council and developed by officers of Three Rivers Distrcit Council.

Version Date

TRDC Climate and Sustainability Impact Assesment

The diminate and dustamasimty impact research				
Score / Colour Code	Impact and Recommendation			
Dark green (4)	Strong positive impacts for sustainability. Recommendation to proceed as is with this aspect.			
	Some positive impact for sustainability. Recommendation to further enhance this aspect where possible and proceed.			
Yellow (2)	Some possible negative impacts for sustainability. Recommendation to review these aspects and find mitigations where possible.			
Red (1)	Considerable inconsistency with the council's sustainability objectives. Strong recommendation to review these aspects and find mitigations.			
Grey (0)	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.			

Guidance for use
Please answer all questions from the drop-down options in the 'impact' column (C), including 'not applicable' as needed.

Please email your completed copy of the form to Joanna.Hewitson@threerivers.gov.uk.

Key to the colour coding of answers is given at the top of the page.

Name of project/policy/procurement and date	EXTENSION OF PUBLIC SPACES PROTECTION ORDER WITH RESTRICTIONS FOR DOGS
Brief description (1-2 sentences):	The Council implemented a PSPO relating to the control of dogs which came into effect on 1st April 2016. The PSPO was then extended in 2019 and then again in 2022.  This report requests that Council varies and extends the Dogs Public Spaces Protection Order (PSPO) for the District for the period April 2025 – March 2022.

	Homes, buildings, infrastructure, equipment and energy

Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.	0		Neutral or not applicable.  Recommendation to consider how benefits could be achieved in this	0
2	What effect will this project have on the direct use of fossil fuels such as gas, petrol, diesel, oil?	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.	0		Neutral or not applicable.  Recommendation to consider how benefits could be achieved in this	0
3	Does this project further maximise the use of existing building space? E.g. co-locating services; bringing under-used space into use; using buildings out-of-hours	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.	0		Neutral or not applicable.  Recommendation to consider how benefits could be achieved in this	0
4	Will any new building constructed or returbished be highly energy efficient in use? (e.g. high levels of insulation, low energy demand per sq. m., no servicing with fossil fuels such as gas heating, EPC	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.	0		Neutral or not applicable.  Recommendation to consider how benefits could be achieved in this	
	Does this make use of sustainable materials / unputs in your project? E.g. re-used or recycled construction materials; timber in place of concrete	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.	0		Neutral or not applicable.  Recommendation to consider how benefits could be achieved in this	0
6	Does this use more sustainable processes in the creation of the project? E.g. modular and off-site construction; use of electrical plant instead of petrol/diesel,	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.	0		Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.	
	Will this increase the supply of renewable energy? e.g. installing solar panels; switching to a renewable energy tariff	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.	0		Neutral or not applicable.  Recommendation to consider how benefits could be achieved in this	0
8	Do any appliances or electrical equipment to be used have high energy efficiency ratings?	Neutral or not applicable. Recommendation to consider how benefits could be achieved in this area, but otherwise proceed.	0		Neutral or not applicable.  Recommendation to consider how benefits could be achieved in this	0
	Average Score		#DIV/0!			#DIV/0!

## Ways to optimise sustainability and work towards net zero carbon:

- Insulate buildings to a high standard.
- Include energy efficiency measures when carrying out refurbishment to deliver improvement in EPC ratings.
- Replace gas botiens with renewable healing, such as heat pumps. Consider District Heat Networks where appropriate.
- Construct new buildings to Passivhaus standard.
- Design and deliver buildings and infrastructure with lower-carbon materials, such as recycled material and timber frames.
- Use construction methods that reduce overall energy use, such as modular, factory-build components, or use of electrical plant

on-site.

Installs dar panels or other renewable energy generation, and consider including battery storage.

Install solar panels or other renewable energy generation, and consider including battery storage.

Switch to a certified renewable energy provider e.g. utilise power purchase agreements (PPA)

Use energy-efficient appliances.

Install low-energy LED lighting.

Install measures to help manage building energy demand, such as smart meters, timers on lighting, or building management systems.

## Ways to optimise sustainability and work towards net zero carbon:

Reduce the need to travel e.g. through remote meetings, or rationalising routes and rounds.

- Share vehicles or substitute different modes of travel, rather than procuring new feet.

Specialy electric, hydric, or most last efficient vehicles for new feet or for services involving transport.

- Support users and staff to walk, cycle, or use public transport e.g. with cycle parking, training, incentives.

- Use zero-emiscian deliveries

- Model and mitigate the project's effect on traffic and congestion e.g. retirning the service or deliveries
